

1 **CLAIMS**

2 **1.** An editing system comprising:

3 a switch assembly comprising one or more software-implemented matrix
4 switches, individual matrix switches comprising:

5 one or more input pins configured to receive a data stream; and

6 one or more output pins configured to output a data stream;

7 the one or more input pins being routable to the one or more output
8 pins, the switch assembly being configured to process both compressed and
9 uncompressed data streams to provide a compressed output data stream that
10 represents a user-defined editing project.

11
12 **2.** The editing system of claim 1, wherein the switch assembly
13 comprises multiple switches.

14
15 **3.** The editing system of claim 2, wherein one switch is configured to
16 process compressed data streams.

17
18 **4.** The editing system of claim 2, wherein one switch is configured to
19 process uncompressed data streams.

20
21 **5.** The editing system of claim 2, wherein one switch is configured to
22 process compressed data streams, and one switch is configured to process
23 uncompressed data streams.
24
25

1 6. One or more computer-readable media having computer-readable
2 instructions thereon which, when executed by a computer, provide the editing
3 system of claim 1.

4
5 7. The editing system of claim 1 configured as a multi-media editing
6 system.

7
8 8. An editing system comprising:
9 a media processing object configured to:
10 receive multiple data streams comprising compressed and
11 uncompressed data streams; and
12 process the one or more data streams to provide a compressed output
13 data stream that represents a media project.

14
15 9. The editing system of claim 8, wherein the media processing object
16 comprises a software-implemented switch assembly.

17
18 10. The editing system of claim 8, wherein the media processing object
19 comprises a software-implemented switch assembly having multiple pins
20 configured to receive or provide data streams.

21
22 11. The editing system of claim 8, wherein the media processing object
23 comprises multiple software-implemented switches each of which having one or
24 more pins configured to receive or provide data streams.

25

1 **12.** The editing system of claim 8, wherein the media project comprises
2 a multi-media project.

3
4 **13.** A multi-media editing system comprising:
5 a switch assembly comprising one or more software-implemented matrix
6 switches, individual matrix switches comprising:

7 one or more input pins configured to receive a data stream; and

8 one or more output pins configured to output a data stream;

9 the one or more input pins being routable to the one or more output
10 pins, the switch assembly being configured to process both compressed and
11 uncompressed data streams to provide a compressed output data stream that
12 represents a user-defined multi-media editing project; and

13 one or more data structures associated with the switch assembly and
14 configured for use in programming the switch assembly to provide a routing
15 scheme for routing input pins to output pins for a given multi-media editing
16 project time line.

17
18 **14.** The multi-media editing system of claim 13, wherein the one or
19 more data structures comprise one or more grid structures, individual grid
20 structures being configured to contain data that defines an association between
21 input and output pins for the project time line.

22
23 **15.** The multi-media editing system of claim 13, wherein the switch
24 assembly comprises multiple switches.

1 **16.** The multi-media editing system of claim 15, wherein the one or
2 more data structures comprise a data structure associated with at least some of the
3 multiple switches.

4
5 **17.** The multi-media editing system of claim 16, wherein the data
6 structures comprise grid structures that contain data that defines an association
7 between input and output pins for the project time line.

8
9 **18.** The multi-media editing system of claim 15, wherein one switch is
10 configured to process compressed data streams, and another switch is configured
11 to process uncompressed data streams.

12
13 **19.** The multi-media editing system of claim 18, wherein the one or
14 more data structures comprise data structures associated with the switches that are
15 configured to process the compressed and uncompressed data streams.

16
17 **20.** The multi-media editing system of claim 19, wherein the data
18 structures comprise grid structures that contain data that defines an association
19 between each switch's input and output pins for the project time line.

20
21 **21.** A multi-media editing system comprising:
22 a switch assembly comprising one or more non-hardware matrix switches,
23 individual matrix switches comprising:
24 one or more input pins configured to receive a data stream; and
25 one or more output pins configured to output a data stream;

1 the one or more input pins being routable to the one or more output pins,
2 the switch assembly being configured to process both compressed and
3 uncompressed data streams to provide a compressed output data stream that
4 represents a user-defined multi-media editing project.

5
6 **22.** The multi-media editing system of claim 21, wherein the switch
7 assembly comprises multiple switches.

8
9 **23.** The multi-media editing system of claim 22, wherein one switch is
10 configured to process compressed data streams.

11
12 **24.** The multi-media editing system of claim 22, wherein one switch is
13 configured to process uncompressed data streams.

14
15 **25.** The multi-media editing system of claim 22, wherein one switch is
16 configured to process compressed data streams, and another switch is configured
17 to process uncompressed data streams.

18
19 **26.** The multi-media editing system of claim 21 further comprising one
20 or more data structures associated with the switch assembly and configured for use
21 in programming the switch assembly to provide a routing scheme for routing input
22 pins to output pins for a given multi-media editing project time line.

1 **27.** The multi-media editing system of claim 26, wherein the one or
2 more data structures comprise grid structures that contain data that defines an
3 association between input and output pins for the project time line.

4
5 **28.** An media processing system comprising:
6 switch means for receiving compressed and uncompressed data streams
7 associated with sources that are to be incorporated into a project and processing
8 the compressed and uncompressed data streams to provide a single compressed
9 output stream that represents the project; and
10 programming means associated with the switch means and configured to
11 program the switch means to provide the single compressed output stream.

12
13 **29.** The multi-media editing system of claim 28, wherein the switch
14 means comprises:

15 first switch means for processing the uncompressed data stream to provide
16 an output uncompressed data stream;

17 second switch means for processing the compressed data stream to provide
18 an output compressed data stream; and

19 third switch means for processing the output uncompressed and compressed
20 data streams to provide the single compressed output stream.

21
22 **30.** The multi-media editing system of claim 28, wherein the switch
23 means comprises means for providing a data stream as a feedback data stream that
24 is processed by the switch means.
25

1 **31.** The multi-media editing system of claim 28, wherein the switch
2 means comprises switch means implemented in software.

3
4 **32.** The multi-media editing system of claim 28, wherein the switch
5 means comprises:

6 first software switch means for processing the uncompressed data stream to
7 provide an output uncompressed data stream;

8 second software switch means for processing the compressed data stream to
9 provide an output compressed data stream; and

10 third software switch means for processing the output uncompressed and
11 compressed data streams to provide the single compressed output stream.

12
13 **33.** A multi-media editing system comprising:

14 a first software-implemented matrix switch comprising one or more input
15 pins and one or more output pins, the one or more input pins being routable to the
16 one or more output pins, the first matrix switch being configured to process one or
17 more uncompressed data streams and output an uncompressed data stream;

18 a second software-implemented matrix switch comprising one or more
19 input pins and one or more output pins, the one or more input pins being routable
20 to the one or more output pins, the second matrix switch being configured to
21 process one or more compressed data streams and output a compressed data
22 stream; and

23 a third software-implemented matrix switch comprising multiple input pins
24 and multiple output pins, the input pins being routable to one or more output pins,
25 the third matrix switch being configured to receive an uncompressed data stream

1 from the first switch and a compressed data stream from the second switch and
2 process the received data streams to provide a single compressed output data
3 stream that represents a user-defined multi-media editing project.

4
5 **34.** The multi-media editing system of claim 33 further comprising a
6 software-implemented compressor element coupled with the third switch and
7 configured to receive and compress an uncompressed data stream.

8
9 **35.** The multi-media editing system of claim 34 further comprising a
10 feedback path between the compressor element and an input pin of the third switch
11 configured to provide a compressed data stream to the third switch's input pin.

12
13 **36.** The multi-media editing system of claim 33, wherein the third
14 switch is programmed to receive, when available, a data stream from the second
15 switch and, when a data stream is unavailable from the second switch, seek a data
16 stream from the first switch.

17
18 **37.** One or more computer-readable having computer-readable
19 instructions thereon which, when executed by a computer, provide the multi-media
20 editing system of claim 33.

21
22 **38.** A multi-media editing system comprising:
23 first software switch means for processing one or more uncompressed data
24 streams to provide an uncompressed data stream, the switch means comprising at
25

1 least one feedback loop that modifies a data stream that is output by the switch
2 means and provides the modified data stream as an input to the switch means;

3 second software switch means for processing one or more compressed data
4 streams to provide a compressed data stream; and

5 a third software switch means for receiving an uncompressed data stream
6 from the first software switch means and a compressed data stream from the
7 second software switch and processing the received data streams to provide a
8 single compressed output data stream that represents a user-defined multi-media
9 editing project.

10
11 **39.** The multi-media editing system of claim 38 further comprising
12 programming means associated with the first and second software switch means
13 for programming routing of data streams therethrough.

14
15 **40.** A multi-media editing system comprising:

16 a first software-implemented matrix switch comprising one or more input
17 pins and one or more output pins, the one or more input pins being routable to the
18 one or more output pins, the first matrix switch being configured to process one or
19 more uncompressed data streams and output an uncompressed data stream;

20 a second software-implemented matrix switch comprising one or more
21 input pins and one or more output pins, the one or more input pins being routable
22 to the one or more output pins, the second matrix switch being configured to
23 process one or more compressed data streams and output a compressed data
24 stream;

1 a third software-implemented matrix switch comprising multiple input pins
2 and multiple output pins, the input pins being routable to one or more output pins,
3 the third matrix switch being configured to receive an uncompressed data stream
4 from the first switch and a compressed data stream from the second switch and
5 process the received data streams to provide a single compressed output data
6 stream that represents a user-defined multi-media editing project; and

7 one or more data structures associated with at least some of the matrix
8 switches and configured for use in programming the associated switches to
9 provide a routing scheme for routing input pins to output pins.

10
11 **41.** The multi-media editing system of claim 40, wherein the one or
12 more data structures comprise one or more grid structures that contain data that
13 defines an association between input and output pins for a project time line.

14
15 **42.** The multi-media editing system of claim 40, wherein the one or
16 more data structures comprise multiple data structures, individual data structures
17 being associated with the first and second switches.

18
19 **43.** The multi-media editing system of claim 42, wherein the data
20 structures comprise grid structures each of which contains data that defines an
21 association between input and output pins of its associated switch for a project
22 time line.

23
24
25

1 **44.** A multi-media editing method comprising:
2 providing a switch assembly comprising one or more software-
3 implemented matrix switches, individual matrix switches comprising one or more
4 input pins and one or more output pins, the one or more input pins being routable
5 to the one or more output pins, the switch assembly being configured to process
6 both compressed and uncompressed data streams to provide a compressed output
7 data stream that represents a user-defined multi-media editing project; and
8 programming the switch assembly using one or more data structures, said
9 programming providing a routing scheme for routing input pins to output pins for
10 a given time period.

11
12 **45.** The multi-media editing method of claim 44, wherein said providing
13 comprises providing multiple switches at least one of which being configured to
14 process both compressed and uncompressed data streams.

15
16 **46.** The multi-media editing method of claim 44, wherein said providing
17 comprises providing multiple switches, one of which being configured to process
18 only compressed data streams.

19
20 **47.** The multi-media editing method of claim 44, wherein said providing
21 comprises providing multiple switches, one of which being configured to process
22 only uncompressed data streams.

1 **48.** The multi-media editing method of claim 44, wherein said providing
2 comprises providing multiple switches:

3 at least one of which being configured to process both compressed
4 and uncompressed data streams;

5 at least one of which being configured to process only compressed
6 data streams; and

7 at least one of which being configured to process only uncompressed
8 data streams.

9
10 **49.** The multi-media editing method of claim 44, wherein said
11 programming comprises programming the switch assembly using one or more grid
12 structures, individual grid structures containing data defining an association
13 between input pins, output pins, and a project time line.

14
15 **50.** The multi-media editing method of claim 44 further comprising:
16 representing the editing project as a hierarchical tree structure; and
17 processing the hierarchical tree structure to provide at least one grid
18 structure containing data that defines an association between input pins, output
19 pins and a time line defined by the editing project.

20
21 **51.** The multi-media editing method of claim 44, wherein said
22 programming comprises:

23 defining a first grid structure containing data that defines an association
24 between input pins, at least one output pin and a time line defined by the editing
25 project; and

1 defining a second grid structure containing data that defines an association
2 between different input pins, at least one different output pin and the time line
3 defined by the editing project.
4

5 **52.** The multi-media editing method of claim 51, wherein the first grid
6 structure is associated with programming the switch assembly to process the
7 uncompressed data stream.
8

9 **53.** The multi-media editing method of claim 51, wherein the second
10 grid structure is associated with programming the switch assembly to process the
11 compressed data stream.
12

13 **54.** The multi-media editing method of claim 51, wherein said defining
14 of the second grid structure comprises deriving the second grid structure from the
15 first grid structure.
16

17 **55.** One or more computer-readable media having computer-readable
18 instructions thereon which, when executed by a computer, implement the method
19 of claim 44.
20

21 **56.** A multi-media editing application executable on one or more
22 computers to implement the method of claim 44.
23
24
25

1 **57.** One or more computer-readable media having computer-readable
2 instructions thereon which, when executed by a computer, cause the computer to:
3 provide a switch assembly comprising multiple software-implemented
4 matrix switches, individual matrix switches comprising one or more input pins and
5 one or more output pins, the one or more input pins being routable to the one or
6 more output pins, the switch assembly comprising:
7 a first switch configured to process uncompressed data streams to
8 provide an uncompressed output data stream;
9 a second switch configured to process compressed data streams to
10 provide a compressed output data stream; and
11 a third switch configured to receive both the uncompressed and
12 compressed output data streams and process the data streams to provide a
13 compressed output data stream that represents a user-defined multi-media
14 editing project; and
15 program the switch assembly by defining a first grid structure containing
16 data that defines an association between the first switch's input pins, at least one
17 output pin and a time line defined by the editing project, and defining a second
18 grid structure containing data that defines an association between the second
19 switch's input pins, at least one output pin and the time line defined by the editing
20 project.

21
22 **58.** The computer-readable media of claim 57, wherein the instructions
23 cause the computer to derive the second grid structure from the first grid structure.
24
25

1 **59.** The computer-readable media of claim 58, wherein the instructions
2 cause the computer to derive the second grid structure by:

3 determining whether any entries in the second grid structure are associated
4 with a data stream source that is not in a format that is the same as or compatible
5 with a format associated with the compressed output data stream that represents a
6 user-defined multi-media editing project; and

7 removing any entry that is not in the same or compatible format.

8
9 **60.** The computer-readable media of claim 59, wherein said format is
10 associated with a frame rate.

11
12 **61.** The computer-readable media of claim 59, wherein said format is
13 associated with a data rate.

14
15 **62.** The computer-readable media of claim 58, wherein the instructions
16 cause the computer to derive the second grid structure by:

17 copying the first grid structure;

18 evaluating the copied grid structure to ascertain entries associated with data
19 source streams that are modified in some way; and

20 removing any grid entries associated with data source streams that are
21 modified in some way.

22
23 **63.** A multi-media editing method comprising:
24 providing a first software-implemented matrix switch comprising one or
25 more input pins and one or more output pins, the one or more input pins being

1 routable to the one or more output pins, the first matrix switch being configured to
2 process one or more uncompressed data streams and output an uncompressed data
3 stream;

4 providing a second software-implemented matrix switch comprising one or
5 more input pins and one or more output pins, the one or more input pins being
6 routable to the one or more output pins, the second matrix switch being configured
7 to process one or more compressed data streams and output a compressed data
8 stream;

9 providing a third software-implemented matrix switch comprising multiple
10 input pins and multiple output pins, the input pins being routable to one or more
11 output pins;

12 receiving, with the third matrix switch, an uncompressed data stream from
13 the first switch and a compressed data stream from the second switch; and

14 processing the received data streams with the third switch to provide a
15 single compressed output data stream that represents a user-defined multi-media
16 editing project.

17
18 **64.** The multi-media editing method of claim 63, wherein said
19 processing comprises:

20 compressing the uncompressed data stream received from the first switch
21 using a software-implemented compressor element coupled with the third switch;
22 and

23 routing the compressed data stream that was compressed by the compressor
24 element to an input pin of the third switch.

25

1 **65.** The multi-media editing method of claim 63 further comprising
2 receiving with the third switch, when available, a data stream from the second
3 switch and, when a data stream is unavailable from the second switch, seeking
4 with the third switch, a data stream from the first switch.

5
6 **66.** One or more computer-readable media having computer-readable
7 instructions thereon which, when executed by a computer, implement the method
8 of claim 63.

9
10 **67.** One or more computer-readable media having computer-readable
11 instructions thereon which, when executed by a computer, cause the computer to:

12 process at least one compressed data stream to provide an output
13 compressed data stream that comprises a portion of a user-defined multi-media
14 editing project that is associated with a data stream source;

15 process one or more uncompressed data streams to manipulate the one or
16 more uncompressed data streams to provide an output uncompressed data stream
17 that comprises a different portion of a user-defined multi-media editing project
18 that is associated with one or more data stream sources;

19 compress the output uncompressed data stream; and

20 associate the output compressed data stream and the compressed output
21 uncompressed data stream together to provide a compressed stream that represents
22 a user-defined multi-media editing project.

1 **68.** The computer-readable media of claim 67, wherein the instructions
2 cause the computer to provide a software-implemented matrix switch that
3 associates the data streams to provide the user-defined multi-media editing project.
4

5 **69.** The computer-readable media of claim 67, wherein the instructions
6 cause the computer to provide a software-implemented matrix switch that
7 associates the data streams to provide the user-defined multi-media editing project,
8 the software-implemented matrix switch being configured to receive the output
9 compressed data stream when it is available, and seek the output uncompressed
10 data stream when the output compressed data stream is unavailable.
11

12 **70.** One or more computer-readable media having computer-readable
13 instructions thereon which, when executed by a computer, cause the computer to:

14 receive and process one or more uncompressed data streams with a first
15 software-implemented matrix switch comprising one or more input pins and one
16 or more output pins, the one or more input pins being routable to the one or more
17 output pins to output an uncompressed data stream;

18 receive and process one or more compressed data streams with a second
19 software-implemented matrix switch comprising one or more input pins and one
20 or more output pins, the one or more input pins being routable to the one or more
21 output pins to output a compressed data stream;

22 receive and process the uncompressed data stream that is output by the first
23 switch and the compressed data stream that is output by the second switch with a
24 third software-implemented matrix switch comprising multiple input pins
25 individual ones of which receive data streams, and one or more output pins

1 individual ones of which provide data streams, the one or more input pins being
2 routable to the one or more output pins to output, at one output pin, a compressed
3 data stream that represents a user-defined multi-media editing project.

4
5 **71.** The computer-readable media of claim 70, wherein the instructions
6 cause the computer to:

7 compress the uncompressed data stream output by the first switch using the
8 third switch; and

9 incorporate the compressed uncompressed data stream with the compressed
10 data stream that is output by the second switch to provide the compressed data
11 stream that represents the user-defined editing project.

12
13 **72.** The computer-readable media of claim 70, wherein the instructions
14 cause the computer to program the first and second switches using first and second
15 data structures respectively associated with the first and second switches, each
16 data structure providing a routing scheme for routing switch input pins to switch
17 output pins.

18
19 **73.** The computer-readable media of claim 72, wherein the first and
20 second data structures comprise grid structures that provide an association
21 between input pins, output pins and a time line defined by a user-defined multi-
22 media editing project.

1 74. The computer-readable media of claim 73, wherein the instructions
2 cause the computer to derive the second grid structure from the first grid structure.

3
4 75. The computer-readable media of claim 74, wherein the instructions
5 cause the computer to derive the second grid structure by:

6 copying the first grid structure;

7 evaluating the copied grid structure to ascertain entries associated with data
8 source streams that are modified in some way; and

9 removing any grid entries associated with data source streams that are
10 modified in some way.
